

END-TO-END CONTACTLESS CUSTOMER JOURNEYS FOR QSR & FULL SERVICE RESTAURANTS

Customers reserve, order and pay at table or click and collect. All from from their smartphone.

The TableRes App eliminates face-to-face contact and removes the need to touch items that have been through many hands.

END TO END CONTACTLESS JOURNEYS

The TableRes App enables end to end contactless customer journeys through QSR and full service restaurants. It eliminates face to face contact between staff and customers and removes the need for them to touch items, like printed menus, cash and bills that have been through many hands.

Using the App, QSR customers can find the closest location, see the full menu, order and pre-pay for delivery or pick up at the counter/kerbside. QSR restaurants also have the option to allow customers to reserve a table through the app, so they can be sure of a place to eat-in once they collect their food. TableRes enables QSR restaurants to easily manage table inventory using a graphical floorplan.

Full service restaurant customers can quickly find a location and reserve a table. Once they arrive, they are able to view the full menu, order and pay. Multiple guests can 'join' the table and, at the end of the meal, they have the option to add a tip and even split the bill. The TableRes App makes this all possible without face to face contact.

QUICK & SIMPLE E-COMMERCE

Up until now setting up restaurants to accept in app payments has been a slow and cumbersome process. Not least because each restaurant needed its own individual e-merchant account. TableRes App's built-in payment processing solution, SinglePay makes the process quick, easy and efficient. SinglePay enables just one e-merchant account to serve all restaurants in the same chain. This saves hundreds of hours of work and thousands in fees. It reduces significantly the deployment lead time for larger chains.

OMNI-CHANNEL

The iOS and Android App can be delivered stand-alone through app stores, embedded into your existing app or even be accessed as a web app that doesn't need to be downloaded. It is multi-lingual, multi-currency and multi-country. TableRes is ideal for larger chains of restaurants and can be rolled out across large estates quickly and easily.

TableRes is a product of BookingTek, a SaaS and e-commerce partner to one third of the world's leading hotel groups and their restaurants.
