

END-TO-END CONTACTLESS CUSTOMER JOURNEYS FOR QSR, FAST CASUAL & FULL SERVICE RESTAURANTS

TableRes App
is free for large
restaurant
groups

Customers reserve,
order and pay at table
or click and collect. All
from their smartphone.

The TableRes App eliminates
face-to-face contact and
removes the need to touch
items that have been through
many hands.

END TO END CONTACTLESS JOURNEYS

The TableRes App enables end to end contactless customer journeys through QSR, fast casual and full service restaurants. It eliminates face to face contact between staff and customers and removes the need for them to touch items, like printed menus, cash and bills that have been through many hands.

Using the App, QSR and fast casual customers can find the closest location, see the full menu, order and pre-pay for delivery or pick up at the counter/kerbside. Restaurants also have the option to allow customers to reserve a table, through the app, so at busy times they can be sure of a place to eat-in once they collect their food.

Full service and fast casual restaurant customers can quickly find a location and reserve a table. Once they arrive, they are able to seat themselves, view the full menu, order food and beverages and pay. Multiple guests can 'join' the table and, at the end of the meal, they have the option to add a tip and even split the bill. The TableRes App makes all this possible without face to face contact.

The Symphony integrated TableRes App is currently available free of charge to large restaurant chains. Ask your Oracle or Evalon account manager or contact BookingTek direct.

QUICK & SIMPLE E-COMMERCE

Up until now setting up restaurants to accept in app payments has been a slow and cumbersome process. Not least because each restaurant needed its own individual e-merchant account. TableRes App's built-in payment processing solution, SinglePay makes the process quick, easy and efficient. SinglePay enables just one e-merchant account to support all restaurants in the same ownership. This saves hundreds of hours of work and thousands in fees. It reduces significantly the deployment lead time for larger chains.

MULTI-CHANNEL

TableRes can be delivered as a web app that doesn't need to be downloaded. A simple link can be embedded in an existing app or a website. Alternatively, it can be created as an iOS and Android app to download from app stores. The app is multi-lingual and multi-currency. TableRes is ideal for larger chains of restaurants and can be rolled out across substantial estates quickly and efficiently.

TableRes is a product of BookingTek, a SaaS and e-commerce partner to one third of the world's leading hotel groups and restaurants.
